# Настройка GIT

## Configure Git for the first time

```
git config --global user.name "  "
git config --global user.email "SBT-Ivanov-II@mail.ca.sbrf.ru"
```

## Working with your repository

### I just want to clone this repository

If you want to simply clone this empty repository then run this command in your terminal.

```
git clone http://sbt-ivanov-ii@stash.ca.sbrf.ru/scm/cards/cards-efs.git
```

#### My code is ready to be pushed

If you already have code ready to be pushed to this repository then run this in your terminal.

```
cd existing-project
git init
git add -A
git commit -m "Initial Commit"
git remote add origin http://sbt-ivanov-ii@stash.ca.sbrf.ru/stash.ca.sbrf.ru/scm/cards/cards-efs.git

git push -u origin master
```

### My code is already tracked by Git

If your code is already tracked by Git then set this repository as your "origin" to push to.

```
cd existing-project
git remote set-url origin http://sbt-ivanov-ii@stash.ca.sbrf.ru/scm/cards/cards-efs.git

git push -u origin master
```

### Выгрузка подмодулей:

1. Инициализировать подмодули.
   git submodule init
2. Обновить подмодули. В процессе выполнения команды будет запрошены логин и пароль в Stash. Введите их.
   git submodule update
